

Updated Dictionary Files
By Ambrose R. Campana

The included DICTWP51.ZIP file contains two WordPerfect 5.1 dictionary files: the main dictionary and the supplemental one.

The two dictionaries have approximately 22,533 more legal and medical words and phrases than the original main dictionary of WP51.

I suggest that both files be loaded into your WP51 directory, replacing your existing files. Be certain that you copy your present files to another directory. Then if you are not satisfied with the two new files contained herein, delete them and load your original files.

These are not my creation, but I did do the work of downloading and placing them in my program. I hope these are of some use to you.
